

GHOST NODES - BUILT FOR CHANGE

When information gets stuck between systems, people become the workaround. Decisions slow down, manual work grows and every change gets harder.

Ghost Nodes turns recurring integration projects into infrastructure you can build on. Connect systems, data and workflows across cloud, on-premises and distributed environments. Automate what slows you down and modernize gradually — without rebuilding everything around each change.

You decide what changes. And when.

WHEN TECHNOLOGY SLOWS YOU DOWN, BUSINESS SUFFERS.

CHANGE SYSTEMS. KEEP OPERATIONS RUNNING.

Replace, add, modernize or move systems or workloads step by step without forcing a big-bang cutover.

CONTROL WHERE DATA AND AI RUN.

Keep sensitive data, execution and AI workloads where your requirements demand — on-premises, in the cloud, in isolated environments, or across any combination of them.

LOWER THE COST OF CHANGE.

Reuse the same infrastructure for new integrations, automations and migrations. Keep more capability in-house instead of starting another consulting project.

CHANGE PROVIDERS WITHOUT REBUILDING.

Change systems, suppliers, clouds or deployment models without rebuilding the architecture around them — or making one provider a prerequisite.

REAL BUSINESS IMPACT

TRANSDEV

300+

Integrations transitioned
while 40+ connected systems
kept running

SODEX HJÄLPMEDELSERVICE

30 % | 25 %

shorter refurbishment cycles |
higher team output

RELYITS

146 %

total revenue growth
with more than 30 % of growth
tied to Ghost-powered business
